FALL ARREST & LIFTING GANTRY

Lightweight, Versatile & Durable Solutions for Fall Arrest, Exhumation/Grave Access & Lifting

2 PERSON PORTABLE
Fall Arrest/Lifting Gantry

Austral International Portable Gantry Beams are a versatile fall arrest solution ideal for any confined space entry work, or recovery operation, combining the large working span of a fixed gantry beam with the lightweight portability of a tripod.

The Austral International Gantry Beam offers adequate clearance for excavator operation during grave digging procedures and an adjustable span capable of providing sufficient offset for the user's anchor point to be positioned directly above the work position, reducing the risk of pendulum falls.

Although primarily designed as a height safety system for personnel, the Austral Gantry Beam doubles as a 1000kg WLL goods lift* when used in conjunction with correct materials handling accessories.

*The Austral Gantry beam should never be used for height safety applications and goods lifting simultaneously.

Lifting Monumental Cover Slabs | Grave Access/ Exhumations | Emergency Personnel Retrieval | Lowering Caskets | Grave Digger Spotting

Features

- Lightweight and portable (transportable in a standard ute)
- Aluminium alloy and 300 series stainless steel construction for corrosion resistance and durability
